

The disk brake system was given an update for the MK3 and MK4 XT912 series aircraft, we're pleased to announce these are now available for our disk brake fitted Edge XT582 and Edge XT912 series aircraft.

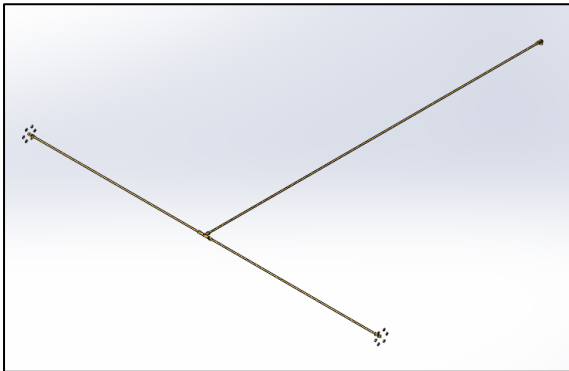

PART No: 113322 - BRAKE RESERVOIR KIT FOR XT MK2 SERIES \$65.64 inc GST

A motorcycle-style brake reservoir is mounted at the top left of the front wheel fork, a hose and fittings plumbing it into the master cylinder. Maintenance including level checking, top-up and bleeding of the system is simpler.

PART No: 112714 - BRAKE LINE ASM TYPE 2 BRAIDED SPARE \$352.86 inc GST

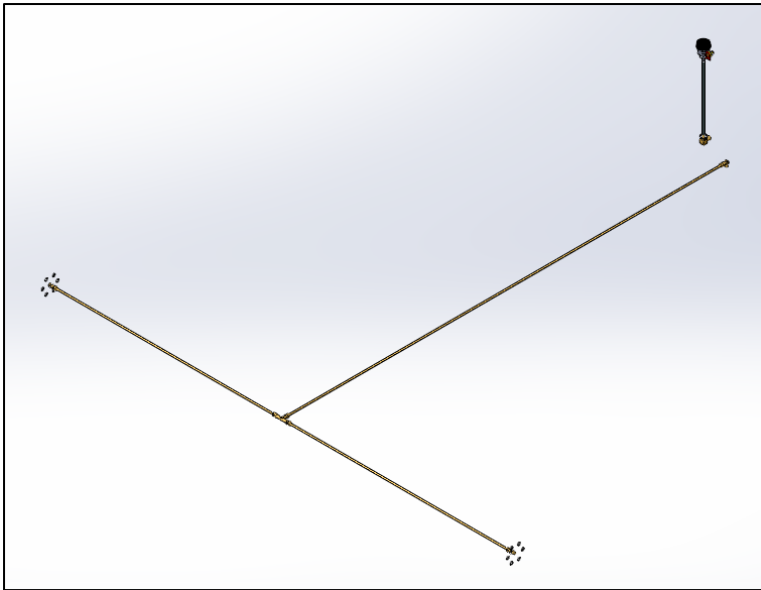

Braided brake lines have been introduced providing a more precise pedal feel and improved stopping power. The included parts replace the existing jic fittings and nylon tube from the master cylinder to the rear wheel slaves.

And we have brought them both together as an option as well:

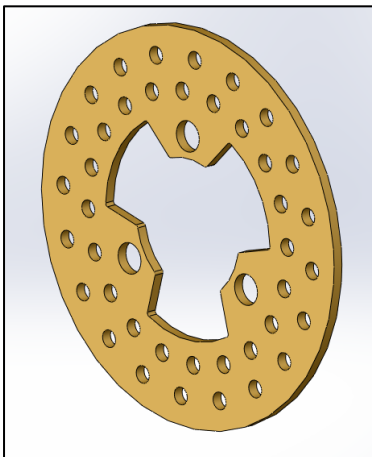

PART No: 113324 - BRAKE RESERVOIR & BRAIDED LINES KIT \$385.91 inc GST

We think it's that good we've priced it to encourage you to consider installing both at once.

PART No: 112989 - DISK BRAKE ROTOR 1050 STEEL 44746 REVD \$33.07 inc GST

If you decide to install the braided lines we also strongly urge you to consider upgrading your disk rotors if you haven't already. We've beefed up the area around the bolt holes of the rotors in anticipation of increased load where they attach to the wheel and are a straight swap in swap out part.

Contact the factory for more details.
